## MA 114 Worksheet \#05: Numerical Integration

1. (a) Write down the Midpoint rule and illustrate how it works with a sketch.
(b) Write down the Trapezoid rule, illustrate how it works with a sketch, and write down the error bound associated with it.
(c) Use the error estimate for the trapezoid rule to find $n$ so that you can approximate

$$
\int_{0}^{1} \sin (2 x) d x
$$

with an error less than $10^{-7}$ ?
2. Use the Midpoint rule to approximate the value of $\int_{-1}^{1} e^{-x^{2}} d x$ with $n=4$. Draw a sketch to determine if the approximation is an overestimate or an underestimate of the integral.
3. The left, right, Trapezoidal, and Midpoint Rule approximations were used to estimate $\int_{0}^{2} f(x) d x$, where $f$ is the function whose graph is shown. The estimates were 0.7811 , $0.8675,0.8632$, and 0.9540 , and the same number of sub- intervals were used in each case.
(a) Which rule produced which estimate?
(b) Between which two approximations does the true value of $\int_{0}^{2} f(x) d x$ lie?

4. Draw the graph of $f(x)=\sin \left(\frac{1}{2} x^{2}\right)$ in the viewing rectangle $[0,1]$ by $[0,0.5]$ and let $I=\int_{0}^{1} f(x) d x$.
(a) Use the graph to decide whether $L_{2}, R_{2}, M_{2}$, and $T_{2}$ underestimate or overestimate $I$.
(b) For any value of $n$, list the numbers $L_{n}, R_{n}, M_{n}, T_{n}$, and $I$ in increasing order.
(c) Compute $L_{5}, R_{5}, M_{5}$, and $T_{5}$. From the graph, which do you think gives the best estimate of $I$ ?
5. The velocity in meters per second for a particle traveling along the axis is given in the table below. Use the Midpoint rule and Trapezoid rule to approximate the total distance the particle traveled from $t=0$ to $t=6$.

| $t$ | $v(t)$ |
| :---: | :--- |
| 0 | 0.75 |
| 1 | 1.34 |
| 2 | 1.5 |
| 3 | 1.9 |
| 4 | 2.5 |
| 5 | 3.2 |
| 6 | 3.0 |
