

MA 114 Worksheet #24: Review for Exam 03

1. Find the volume of the following solids.
 - (a) The solid obtained by rotating the region bounded by $y = x^2$ and $x = y^2$ about the x -axis,
 - (b) The solid obtained by rotating the region bounded by $x = y^2$ and $x = 1$ about the line $x = 1$,
 - (c) The solid obtained by rotating the region bounded by $y = 4x - x^2$ and $y = 3$ about the line $x = 1$,
 - (d) The solid with circular base of radius 1 and cross-sections perpendicular to the base that are equilateral triangles.

2. Find the area of the surface of revolution obtained by rotating the given curve about the given axis.
 - (a) $y = \sqrt{x+1}$, $0 \leq x \leq 3$; about x -axis,
 - (b) $x = 3t^2$, $y = 2t^3$, $0 \leq t \leq 5$; about y -axis.

3. Compute the arc length of the following curves.
 - (a) $x = a \cos^3 \theta$, $y = a \sin^3 \theta$, $0 \leq \theta \leq 2\pi$,
 - (b) $y = \sqrt{2-x^2}$, $0 \leq x \leq 1$.

4. Find the centroid of the region bounded by $y = \sqrt{x}$ and $y = x$.

5. Find the average value of the function bounded by $y = 3 \sin(x) + \cos(2x)$ on the interval $[0, \pi]$.

6. Compute the slope of the tangent line to the curve in Problem ??(??) above, with $a = 8$, at the point $(1, \sqrt{3})$. Use this to determine an equation for the tangent line.

7. Consider the curve given by the parametric equations $(x(t), y(t)) = (t^2, 2t + 1)$.
 - (a) Find the tangent line to the curve at $(4, -3)$. Put your answer in the form $y = mx + b$.
 - (b) Find second derivative $\frac{d^2y}{dx^2}$ at $(x, y) = (4, -3)$. Is the curve concave up or concave down near this point?
